

MIXED-METHODS CONTENT ANALYSIS

Brand Voice vs. Audience Reality

A case study on The Bare Female, an international yoga and embodiment platform

Ambrosia Ardenvale-Wood

BUS 249 Academic Project | June 2026

What content strategies drive loyalty for a digital wellness brand?

The Bare Female is an international yoga platform built around yin yoga, nervous system regulation, and feminine embodiment practices. This project investigates which content and communication strategies foster audience loyalty, and how that brand experience is perceived by viewers.

217K

YouTube Subscribers

25K

Instagram Followers

Unfold

Private Membership Platform

A two-track mixed-methods approach

Qualitative Track

13 brand content units (7 video descriptions, 6 community posts)

5 CODING CATEGORIES

- Community Language
- Inner Authority References
- Engagement Prompts
- Values Alignment
- Exclusivity

Quantitative Track

24 viewer comments collected across 5 YouTube videos

6 SCORING DIMENSIONS

- Sense of Belonging
- Parasocial Intimacy
- Inner Authority Mirroring
- Emotional & Somatic Transformation
- Loyalty & Sustained Engagement
- Overall Sentiment

**All dimensions scored 0 (Absent) to 2 (Prominent); Overall Sentiment scored 1–3 (Negative–Positive).*

Values Alignment dominates brand voice at 1.92 of 2.0

Exclusivity scores lowest at 0.92, the only sub-1.0 category

CONTENT TYPE COMPARISON

Video descriptions and community posts serve complementary roles

**Key contrast: Inner Authority References lead in video descriptions (1.71 vs. 0.83); Community Language leads in community posts (2.0 vs. 1.43).*

QUANTITATIVE FINDINGS

Viewers respond to emotional and somatic transformation

Overall Sentiment (excluded) averaged a uniform 3.0

THE CENTRAL FINDING

Viewers connect with Lisa personally, and do not appear driven toward community with one another

1.69

Community Language

(brand-side score)

0.88

Sense of Belonging

(audience-side score)

1.25

Parasocial Intimacy

(audience-side score)

Despite consistent communal language (“our family,” “we journey together”), viewers describe the relationship in direct, personal terms, addressing Lisa as “dear Lisa,” “Mama Bare,” and “an angel.”

Brand language translates to audience experience at a consistent rate across both dimensions

$\Delta 0.43$ for the Inner Authority pair, $\Delta 0.42$ for Values & Somatic: the pairs translate brand to audience at the same rate. This consistency suggests the gap may be structural rather than content-dependent. Audiences may underreport intensity regardless of theme, possibly because public comments self-select for lower disclosure of deeply internalized experience.

Three data-driven recommendations

Position Unfold around proximity to Lisa

Parasocial Intimacy (1.25) outweighs Sense of Belonging (0.88) lead conversion messaging with deepened access to Lisa, not peer community.

Add Inner Authority content to posts

Inner Authority References score 1.71 in video descriptions but drop to 0.83 in community posts, a content gap and an opportunity.

Embed invitations in personal storytelling

Community posts with personal disclosure hit the highest Community Language score (2.0), the natural home for soft membership invitations.

Honest constraints and what a broader study would add

Sampling Limitation

Overall Sentiment scored a uniform 3.0, likely a sign of self-selection bias in public YouTube comments, not a representative audience view.

Recommendation

A randomized survey across the full 217K-subscriber base and Unfold members would generate more generalizable data on conversion drivers and brand perception.

Mixed-methods research reveals the gap between brand intent and audience experience

- Values-driven brand language and audience transformation are strongly aligned.
- Self-trust philosophy is felt by viewers more than it is voiced back in their own words.
- Loyalty centers on a personal bond with Lisa rather than a peer community, reshaping how membership should be marketed.
